

TEACHING ADAPTABILITY

Preparing students for a changing world

EMPOWER

Students need to practice making their own decisions and forming their own opinions. Empower your students through learning choices, including student voices in school decision-making, and allowing them to discover knowledge rather than telling them content.

CHALLENGE

Understanding new ideas, people, and cultures takes us beyond the familiar and often into the uncomfortable. Stretch your students by giving them the chance to communicate with people from around the world to build skills readying them for global interactions.

MODIFY

Making mistakes and subsequent modifications are part of the process of creating new ideas, knowledge, and things. Lead your students to view mistakes as part of the journey, rather than as failures, and watch their creativity thrive!

COLLABORATE

Teamwork is a critical skill for both the 21st Century workplace and for addressing global issues. Design opportunities for your students to authentically practice these skills and learn how to manage in groups that include different skills, motivations, and personalities.

ACT

Not only is applied learning more successful, it is an important habit to nurture in students. Build your student's entrepreneurial skills, efficacy, deep understanding, and flexibility through active application of knowledge and implementation of ideas.
